Mathematical Biosciences

an international journal

Volume 123

E. H. Twizell (Uxbridge, England) and K. Kubota (Tokyo, Japan)
Lag Time in the Dual Sorption Model for Percutaneous Absorption with Finite Skin-Receptor Boundary Clearance 1

Robert J. H. Payne, Martin A. Nowak, and Baruch S. Blumberg (Oxford, United Kingdom)
A Cellular Model to Explain the Pathogenesis of Infection by the Hepatitis B Virus 25

Kakuji J. Tojo and Akira Ohtori (Fukuoka, Japan)
Pharmacokinetic Model of Intravitreal Drug Injection 59

Roberto Roncaglia, Riccardo Mannella, and Paolo Grigolini (Pisa, Italy)
Fractal Properties of Ion Channels and Diffusion 77

Didier G. Arques (Besançon, France) and Christian J. Michel (Belfort, France)
Analytical Expression of the Purine/Pyrimidine Autocorrelation Function after and before Random Mutations 103

E. Georg Luebeck and Suresh H. Moolgavkar (Seattle, Washington)
Simulating the Process of Malignant Transformation 127

Basil C. Baltzis and Ming Wu (Newark, New Jersey)
Steady-State Coexistence of Three Pure and Simple Competitors in a Four-Membered Reactor Network 147

Frank Ball (Nottingham, England) and Ingemar Nåsell (Stockholm, Sweden)
The Shape of the Size Distribution of an Epidemic in a Finite Population . . .167

J. M. Murray (Kensington, Australia)
Optimal Drug Regimens in Cancer Chemotheory for Single Drugs that Block Progression through the Cell Cycle 183

Wayne Goddard (Philadelphia, Pennsylvania), Ewa Kubicka, Grzegorz Kubicki, and F. R. McMorris (Louisville, Kentucky)
The Agreement Metric for Labeled Binary Trees 215

Eduardo Massad, Francisco Antonio Bezerra Coutinho, Hyan Mo Yang, Heráclito Barbosa de Carvalho, Fábio Mesquita, and Marcelo Nascimento Burattini (São Paulo, Brazil)
The Basic Reproduction Ratio of HIV among Intravenous Drug Users 227
